Office Action Summary

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to articles, classified in class 503, subclass 200.
  - II. Claims 12-16, drawn to processes, classified in class 156, subclass 235.
2. The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process (e.g., smooth the protective layer after transfer).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. All claims are additionally subject to the following election of species.

This application contains claims directed to the following patentably distinct species of the claimed invention: Recording material and process of making the same wherein the recording material comprises in order

A. A support, a heat-sensitive recording layer and a protective layer (claims 1-5);

B. A support, a heat-sensitive recording layer, an adhesive layer and a protective layer (claims 7 and 9-11);

- C. A support, an adhesive layer, a heat-sensitive recording layer and a protective layer;
- D. A support, a heat-sensitive recording layer, an intermediate layer and a protective layer;
- E. A support, a heat-sensitive recording layer, an intermediate layer, an adhesive layer and a protective layer; and
- F. A support, an adhesive layer, an intermediate layer, a heat-sensitive recording layer and a protective layer.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 6, 8 and 12-16 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1774

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bruce Hess whose telephone number is (703) 308-2402. The examiner can normally be reached on Monday to Friday 9 Am to 5 PM.
